### Comments

- not a great amount of examples towards the later chapters <sup>3</sup>

**What has been particularly good with this course?**

- The lectures were great! Very structured Also the homework and the quizzes <sup>1</sup>
- Good that it was in english: then you practiced studying maths in another language. The actualteaching and lectures were very pedagogic and easy to follow. The fact that we were asked to ask many questions really helped us to listen and activate us during lectures. <sup>4</sup>

### **Which measures could improve this course?**

- Upload more material to Studentportalen, especially the material from the exercise sessions. Scanned notes is sufficient <sup>1</sup>
- Maybe a bit more of numerical methods, since it is largely relevant for the rest of the education. <sup>4</sup>
- More recommended exercises from the book (apart from the exercises from the homework) wouldn't hurt. Also it would've been easier to plan the week with all the other school work if the homework was put online a bit earlier (3-4 more days would have helped, or maybe just put all the exercises at the start of the semester). <sup>5</sup>

*Do you consider this course relevant to your education?*
