A lot was required to learn in comparison to some other courses which is good and bad.

Ros is a good teacher. He cares about teaching and learning. The course is well structured into week-long modules. His handwriting on the blackboard is clear and easy to follow.

Excellent except for the fact that there were new material so close to the final test

Amazing that Ros stayed with us preparing for the exam even though he didnt have too, I would say since i started at UU this is the teacher that cared most about his students!

The computer assignment felt out of place and would be more fitting in a Scientific computing course

Good book, only thing missing was a better highlighting of the definitions

Math is fun and the ODE_course was nice since it built on earlier courses, so it went a bit deeper and felt more useful.

useful knowledge & dedicated teacher. The quizzes help me detect & solve misunderstandings and lack of knowledge, which is a good preparation before the exams.

The system with quizzes was awesome and I liked that the questions was on the same level as the questions on exam, therefor the quizzes were helpful, would they be easier they would not have helpt me to see what i had to improve for exam. The lectures were rich and every note written on the black board was of importance, in other classes my lecturenotes have not helped me because they the material in the notes have not matchet the content of the exam. but now they did, they were concentratet and had good content. Teacher also gave good answers to our questions.

It's a very important and useful subject. A good teacher who cares about the students' learning.

I've liked the quizzes they have been a good way to keep up with the course, and a good way to make you continuously studie during the whole course.

The homeworks and quizzes were good. The lecures and lessons were also good. It is good to have scheduled time to work on problems and be able to get help with them.

The summary of everything we needed to know before the exam was very valuable for me

Good lectures

I really enjoyed the smal classes and Ros as a teacher

I don't think people need a point for participating with questions, just encouraging and explaining the importance of active participation is motivation enough I think. And it takes out the risk that 1) some get nervous or reluctant to asking questions because they feel judged 2) bonus points for an examination that should be anonymous means a part (even if it's a small part) of the grade is not anonymous, and therefore it relies on the premise that the lecturer is objective and fair, which I think might not have been a problem in this course, but it still seems like an opening to bad stuff.

There need to be complete solutions available for the homeworks to get myself unstuck when I'm unable to progress. This would also be a useful form of repetition of the things I didn't pick up or quite understand during the lectures/seminars. I think the bonus points need to be more generous. One or 2 bonus points on the exam aren't as much valuable during a 100-points exam compared to the normal 40-points exam. And the bonus for asking questions - I think it doesn't really make any difference for me. I would ask a bunch of questions anyway. And if I don't have any good questions to ask and nobody else asks anything, the bonus point for questions would only encourage me to ask a dumb question (that I probably already know the answer to) just so I can get a bonus point on the exam.

sync the schedule with which of the classes that are lessons and lecture so if there is scheme collision you can choose the class of importance. have at least one or two repetition classes before exam!, It wuld have helped me alot..

Would have been good to have more time on the power series chapter and the later chapters and less on early chapters. Solutions to the exercises.

I did not like the way bonus points are allocated. Getting a few points to be able TO pass and not after you pass(as we did this course) would inspire more study time into this course for me. The get points with good questions is not really something I believe in, since its unfair for people having trouble asking or knowing how to formulate a sentence.

Would be good if we got to know all the assignments in the book from start instead of getting to know them week to week. It would make it easier to gett a view of the total course material.

The course got pretty intense towards the end which it usually does but I would really like it if it kicked of a bit earlier so that preparing for the exam is a bit easier.

I'm not sure why this course is recommended for students of the bachelor programme in physics since almost all the material has been covered in previous courses. That is why this course felt very easy and not at all challenging to me. It was a good course but I would rather have taken a more challenging course with less familiar material.

it's quite a tough course for being 5 points and it makes it harder to get a nice grade on it, but I think I end up learning more because of it.

Rostyslav you did an amazing job with this course and I was glad to have you as my teacher, take care!

Big cred to Rostyslav for dealing very good with annoying student!

I think that the practice exams that where uploaded where not a fair reflection of the exam we took, the one we took had pretty much all of the hardest examples in it. The amount of time that u get to answer all the 30 or so questions was to short, when writing the exam i barely had time to think i just had to write. Still though i would recommend this course to anyone in this field, really fun and challenging! Good job Ros!
